

How will you test a wireless mouse? What are the different things you will test and check before you can say that it is a good quality wireless mouse?

Hardware Test:

1. Check if the mouse is RF(Radio Frequency) Mouse or Bluetooth RF Mouse.
2. Type of sensor used in the mouse.
3. Verify that left-click and right-click buttons are working fine.
4. Check if the scroll wheel is present at the top or not.
5. Multi functional buttons on the side.
6. Check the dimension and weight of the mouse, if it's suitable to grip and work.
7. Verify that the mouse works in all the allowed surfaces.
8. Check the range upto which the mouse can be operated smoothly.
9. Battery required and power consumption.
10. On and Off button for battery friendly uses.

Working Test:

1. If Latency is minimum.
2. Latency between two clicks.
3. Speed and accuracy of the mouse pointer.
4. Drag and Drop functionality.

Finally Cost Comparison with respect to needs.
